Cyber First
CAREERS

How many selfies do we take per year? Over 24 billion – and I help protect them all.

This is a **CyberFirst** world.
Train for it.

CAREERS

Technology is everywhere. It's central to everything we rely on, from power supplies to the emergency services, from train schedules to flight paths. So if we want to protect our digital world, we need a new generation of cyber specialists.

That's why GCHQ and the National Cyber Security Centre (NCSC) set up CyberFirst, to train people from all backgrounds across the UK. For young people like you, our CyberFirst bursary or degree apprenticeship could be the perfect opportunity to find a calling with purpose.

You don't even have to be a coder or tech wizard to be exactly who we need. On our bursary, there are plenty of non-coding roles on offer, while on our degree apprenticeship, we'll teach you to code on the job. So, if you're passionate about technology, interested in how it works, and ready to learn, then you could be just right for our programmes. Here's what's on offer:

University bursary:

Earn **£4k** per year of study in any degree subject, with paid summer training with tech employers.

Degree apprenticeship:

Earn **£19k** a year, study for your degree, and work in a real government tech role.

This is a **CyberFirst** world.
Find out how you can train for it at:
